***Allowable Subject Matter***

The following is an examiner's statement of reasons for allowance:

1. Claims 1-25 are allowed.
2. The present invention is directed to an image data compensation circuit and method to reduce flicker. Each independent claim identifies the uniquely distinct feature “ adding the second compensation data in a case in which the voltage signal is positive...” as recited in claim 1-2, 14, 20, claim 8, Lines 16-18, claim 18, Lines 19-20, claim 21, Lines 24-25, claim 22, Lines 21-24 and “ a multiplier that multiplies the second coefficient data from the coefficient interpolating unit to generate compensation data... the second coefficient data from the coefficient interpolating unit in case that the level of image data is less than the first voltage level...” as recited in claim 24, Lines 13-14 and 16-17. The closest arts, (Lin, Konuma et al. and Hashimoto et al.) as discussed in the Office Action dated on 07.16.04 disclose related device having first compensation data corresponding to the levels available to the image, either singularly or in combination, fail to anticipate or render the above underlined limitations obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
